House Sound Requirements

1. A minimum of 10 channel mixing console for house sound, and an AC plug and space on stage for monitor console provided and operated by the band. All microphones, stands, cables and monitors are provided by the band as well.

2. House speaker cabinets should be capable of producing a sound pressure level of 110 dB un-weighted, at house mixing position, with sufficient power to be free of audible distortion.

3. Stage area must be at least 22 feet wide by 10 feet deep.

4. House engineer will receive 10 channels of iso signal and will be responsible for the house mix, at all times under the direction of the band from the stage.
